

# Microscopy Made To Measure

## State-of-the-Art SEM and AFM

Agilent Technologies provides innovative, high-precision microscopy solutions designed to facilitate a wide range of applications right in your own laboratory.

The new Agilent 8500 FE-SEM is a compact field emission scanning electron microscope (FE-SEM) offering true plug-and-play installation. Optimized for low-voltage nanoscale imaging of energy-sensitive samples, the 8500 delivers resolution typically found only in much larger and more expensive field emission microscopes.

Agilent's modular atomic force microscope (AFM) platform, meanwhile, offers industry-leading environmental, temperature, and fluid-handling systems for electrochemistry, materials science, and life science applications at the nanoscale.

Let Agilent tailor a microscopy solution to fit your research.
